Mitchell Cloud Estimating Release Notes

Release Dates

The next version of Mitchell Cloud Estimating is released on the following dates by region:

- **Canada**: November 29th
- **United States**: December 2nd

Estimating

Display Logos on Estimates for Staff Estimators

Previous to this release, company logos on estimates were only supported for shop estimators. Now, both shop and staff estimators can add their logo to an alternate header for an estimate and its PDF printout.

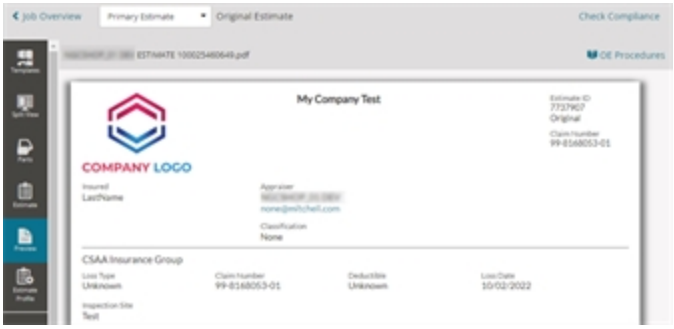
Follow the steps to create or edit an Estimate Header with a company logo for staff:

1. Log into WorkCenter as a staff manager and/or profile administrator role.
2. On the Manage Menu bar, select Estimate Header then + Add Estimate Header to create a new one. The New Estimate Header window opens.

> Note: For the best quality, size the image to 310 x 150 pixels (px) at 72 PPI.

3. Configure the fields as desired then click on Add Logo to upload the logo image in a jpg, gif, or png format from your computer.
4. Select + Add Estimate Header to save the changes to a new Estimate Header.
5. In the Estimate Profile, it displays as an Alternate Estimate Header on the Print Preferences Estimate Customization section.
6. Save the Estimate Profile and assign it to the desired users.
7. *Perquisite:* Ensure a staff manager and/or profile administrator has configured an Alternate Estimate Header with the logo in WorkCenter and has assigned it to you.
8. Log into Mitchell Cloud Estimating as an approved staff estimator.
9. On a new or existing estimate, select Estimate Profile and ensure the correct profile is selected.
10. Navigate to Print Preferences then Estimate Customization. Click Edit then ensure the correct Alternate Estimate Header is selected with the desired logo.

Your company logo now displays on the PDF Preview and corresponding printout.



Search Results Display Categories and Sub-Categories

The Search functionality in Mitchell Cloud Estimating has been enhanced to display categories and sub-categories on the search results. Due to many categories having the same part name, source, line barcode, part number, and price, this

© 2022 Enlyte Group, LLC All Rights Reserved.

feature helps differentiate between selection of desired and undesired results.

For example, upon searching for Altenator, you'll see results such as "Engine | Detroit Diesel Dd15 Eng" and "Engine | Detroit Diesel 6 Cyl, 8 Cyl Eng" underneath the highlighted part name.

Display Updated Vehicle Recall Types

The ambiguous display around vehicle recall types has been updated to make it clearer for you to see the recall type for each recall the vehicle has. You can access vehicle recalls through the Parts or Split View tabs in Mitchell Cloud Estimating then navigate to Information then Safety Recall (NHTSA) to see the list of safety recalls.

Blend Logic for Truck Beds

Prior to this release, blending Outer Side Bed Side panels for truck beds was a cumbersome process prone to human errors. With this release, the Blend labor operation for outer side panels of truck beds is streamlined to be more intuitive such that users no longer need to select Refinish Outer Side Panel to get to Blend for the same part. When they select the truck bed repair line, the Repair operation appears next to the other selections such as Remove and Replace (R&R).

Clear Coat Calculation in Three Stage

Currently, users need to manually update the three-stage repair line whenever there is a change in clear coat. This process is cumbersome because you need to remember to adjust labor units in the three-stage line while writing the estimate. With this new feature, Mitchell Cloud Estimating updates, includes, or excludes the labor units of the three-stage repair line automatically in correlation with the clear coat checkbox on the Estimate page.

There are a few three-stage scenarios to be aware of:

- Clear Coat is checked then the three-stage repair line is updated on the estimate
- Clear Coat is unchecked, therefore three-stage repair line is removed from the estimate
- Clear Coat is checked after a removal has already taken place. The three-stage repair line is added back to the estimate.

Estimate Removal in Repair Assignment Cancellation Scenario

In scenarios where a repair assignment moves shops, the associated estimate or in-progress supplements were not being removed. This resulted multiple versions for the new shop. With this release, those estimates and accompanying supplements in the repair assignment are removed. This allows the new shop to write new supplements for the repair assignment estimate without worrying about duplicate or multiple versions.

> Note: Cancellation of appraisal and repair assignments on supplements is not available with this release.

In order to remove the old estimate and any in-progress supplements, the following settings in WorkCenter must be configured on the Estimate Retrieval: Estimate Retrieval Settings section:

- Allow Body Shop to Receive Body Shop Written Estimates set to Yes
- Allow Body Shop to Receive Staff Written Estimates set to DRP
- Allow Staff to Receive Body Shop Written Estimates set to Yes

© 2022 Enlyte Group, LLC All Rights Reserved.

Once the adjustor in WorkCenter creates a new repair assignment on the same claim and assigns it to the new shop, the initial shop receives a message when working in Mitchell Cloud Estimating stating that the Estimate is no longer available. The new shop then sees the original estimate and can create supplements as normal for the estimate.

Redirect Window for Accessing an External Parts Providers Site

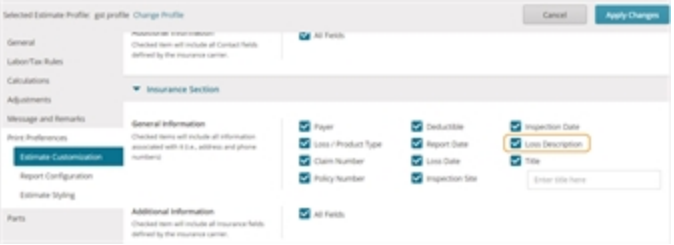
Parts Providers sites are accessible through the Send To... button in Mitchell Cloud Estimating. With this release, a See You Later window notifys you that you are leaving Mitchell Cloud Estimating for an external parts provider website. The window disappears with a countdown of three seconds before the parts provider site is displayed.

Estimate Profile

Loss Description Added to Estimate PDF & Estimate Profile Settings

Prior to this release, the loss description field on the estimate PDF was unavailable. SIP Assignments from Mitchell Connect were not passing the loss description to Mitchell Cloud Estimating either. With this release, you can add the loss description to the estimate PDF and access it without having to navigate back to the insurance page.

Ensure the Mitchell Connect Loss Description field has on the Insurance card is filled in. In Mitchell Cloud Estimating, activate the Loss Description checkbox on the Insurance section of the Estimate Profile Estimate Customization page for Print Preferences. The description now shows on the PDF Preview page.



Hide Custom and Alternate Estimate Header Options from the Estimate Profile Settings

Prior to this release, all alternate and custom Estimate Profile headers configured in WorkCenter displayed in Mitchell Cloud Estimating and Mitchell Connect. With this release, staff managers and/or profile administrators in WorkCenter can hide, or make read-only, alternate and custom estimate headers from the staff, independent appraisers, and shop estimators utilizing the Estimate Profile settings in Mitchell Cloud Estimating and Mitchell Connect.

The prerequisite settings are on the Mitchell Cloud Estimating: MCE Settings section in WorkCenter.

© 2022 Enlyte Group, LLC All Rights Reserved.

Set the Hide Custom Estimate Header and/or Hide Alternate Estimate Header settings to Yes if you want them inactive in Mitchell Cloud Estimating.

Note: For jobs with no insurance company available (i.e., a walk-in job), the custom settings cannot be configured.

The existing availability of custom and alternate header options are as follows for these users:

- Shop or Independent Appraiser - Alternate Estimate Header is not available but Custom Estimate Header is present.
- Staff User - Both the Alternate Estimate Header and Custom Estimate Header are visible as per custom setting on the your staff user company.

Estimate Profile Header Information Update

In an Estimate Profile, the Header Information under Print Preferences and Estimate Customization have been relabeled. Below is a table of the changes.

Pre-22.4 Release Label	Post-22.4 Release Label
Use I.A., Shop or Staff Information for Default Estimate Header	Default Estimate Header
*Additional Headers	*Alternate Estimate Header
Use This Option To Create A Specific Header	Custom Estimate Header

Limit Editing of Estimate Messages from WorkCenter

Insurance companies can now set whether or not appraisers have access to edit Messages in the Estimate Profile settings. In WorkCenter, navigate to the Message and Remarks page of the Estimate Profile. Activate or deactivate the Allow Appraisers to Edit toggle depending on your company requirements. If the setting is deactivated, appraisers in Mitchell Cloud Estimating see read-only text in the Estimate Profile Message and Remarks section when editing the settings.

Limit Styling of Estimate from WorkCenter

Insurance companies can now set whether or not appraisers have access to edit Estimate Styles in the Estimate Profile settings. In WorkCenter, navigate to the Print Preference Estimate Styling tab on the Estimate Profile. Activate or deactivate the Allow Appraisers to Edit toggle depending on your company requirements. If the setting is deactivated, appraisers in Mitchell Cloud Estimating see read-only text in the Estimate Profile Print Preferences then Message and Remarks section when editing the settings.

Lookup Tables for Maximum Allowed Fields in Paint/Material Calculation Rates

Lookup table manager (having the LTMANAGER role code) in WorkCenter configure lookup tables to be utilized within the Estimate Profile. Through a setup wizard, profile fields are preconfigured for population within Mitchell Cloud Estimating.

In this release, the Maximum Allowed fields for paint, shop, and hazardous waste calculation rates on the Calculation tab are configurable through lookup tables in WorkCenter. With lookup tables, you can manage all the different rates in one location instead of having to create separate estimate profiles for each set of maximum allowed values.

Include or Exclude Clear Coat Labor Time for Interior Structures Through the Estimate Profile

Clear coat labor time for internal structures can be included or excluded by default through a new Estimate Profile setting. On the Calculations tab, you can choose to check (include) or leave blank (exclude) the Add Clear Coat Labor Time By Default For Interior Structures checkbox. This feature is available for appraisers in Mitchell Cloud Estimating and profile administrators in WorkCenter.

Note: This enhancement is not available for commercial vehicles.

Parts Prediction Handler (PPH) Automatic Estimating

Differentiate Between Labor Operations with the Same Part

Users utilizing Parts Prediction Handler (PPH) workflow for automated estimating can utilize the new Parts Dictionary 2.0 to map more advanced parts coverage compared to its legacy counterpart of Dictionary 1.0 and 1.5. Before this release, multiple lines with the same part provider code and different operations were passed via PPH with only one line getting added as a mapped line.

Now, when Remove & Install (R&I) lines have Remove & Replace (R&R) match/matches with the same parts provider code, PPH decides where and what to map them as on the estimate. The results differ if it is a single match versus multiple matches and if Optimal Part Selection is on or off.

The following bullets are examples of PPH functionality under different scenarios.

- If an R&I line is passed with an R&R labor operation line for the same part, both R&I and R&R labor operation lines are added to the estimate.
- If an R&I line is passed with a Repair labor operation line for same part, then both R&I and Repair labor operation lines are added to the estimate.
- R&R and Repair operation lines for the same part are mutually exclusive operations so if these are passed then only one line gets mapped while the other remains unmapped.

Include Part Details for Run Breakeven in Automation Workflow

Users utilizing Parts Prediction Handler (PPH) workflow for automated estimating can utilize the new Parts Dictionary 2.0 to map more advanced parts coverage compared to its legacy counterpart of Dictionary 1.0 and 1.5. The overall goal is for PPH to automatically decide whether a repair line with a Repair operation should be kept as is or changed to Remove & Replace (R&R).

Previous versions supported the "RunAndApply" functionality where when the cost of the repair exceeds replacement, the labor operation is automatically changed to R&R from Repair. But this automated update means certain users cannot deliberate the part information results prior to the estimate creation.

With this release, the part information is also sent as "RunOnly" so it can be used elsewhere in their system for deliberation before a decision is made for the resulting estimate.

Miscellaneous

Rebranding for Mitchell and Enlyte Logos

The web-page favicon and the repair line print page have been updated to include the new Mitchell/Enlyte logo and branding in Mitchell Cloud Estimating.

Removed Feedback Button from Mitchell Cloud Estimating

In-app Feedback functionality has been removed from Mitchell Cloud Estimating. The specific, general, and contact us forms are no longer available in Mitchell Cloud Estimating, but they are still accessible in Mitchell Connect. In replacement of the contact us form, chat support has been implemented. Please see "Technical Assistance Center (TAC) Chat Support " topic below for additional information.

Technical Assistance Center (TAC) Chat Support

Instead of calling in to receive support from the Mitchell Technical Assistance Center (TAC) team, you can now use the chat feature for communication and assistance. Select the chat icon and fill out a questionnaire about your request which is added to the TAC agent queue. When an agent is available, you will automatically connect and begin resolution through a chat session.

Note: Despite the Feedback button being removed in Mitchell Cloud Estimating, it can still be accessed and seen on some pages in Mitchell Connect and other Mitchell products.

Chat with a Live Agent

The Chat feature is now available for both United States and Canada users.

Use the chat feature to obtain technical support with a live agent. Available hours are 5:00 AM to 5:00 PM Pacific Standard Time. If an agent is not available, the chat icon won't open the chat feature.

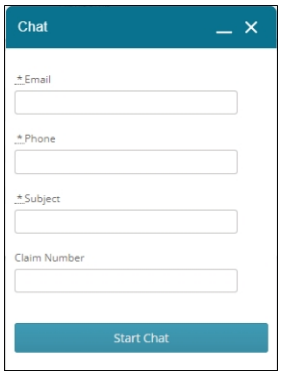
Note: The Chat feature is currently only available to customers in Canada.

Note: The Chat feature is not available for Mitchell Diagnostics, Parts order pages, or the Repair Plan card.

Note: Some insurance companies may have this feature disabled for Staff users.

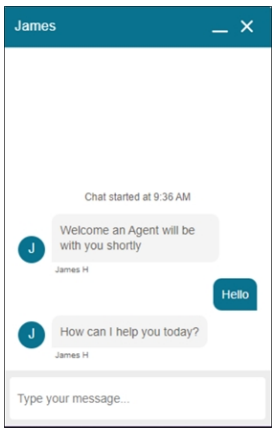
© 2022 Enlyte Group, LLC All Rights Reserved.

1. Click at the bottom of the page.
2. In the Chat window, enter your email, phone number, and the subject of your chat. Enter a claim number if you have one available.



Note: The Chat window doesn't appear if a live agent isn't available.

3. Click **Start Chat**. The Waiting to Chat window appears while you are connecting.
4. Enter your text in the **Type your message** box and press **Enter** to send your message.



Tip: The chat window remains visible even if you go to another page. The chat window is not visible if you go to Mitchell Diagnostics, Parts Order pages, or items started from Repair Plan card.

5. Click **X** to close the chat.
